low recharge high	0	1
This has been obtained in	sing	heama
$\frac{s}{\phi(s,a s,a)} = \rho[s+1]$	8' Rt+1	=9 St=8, At=a

According to Bellman equation for VT,
${}^{9}V_{\pi}(8) = \underbrace{\leq \pi(a s) \leq p(8',n 8,a)}_{a} \underbrace{r + \varphi V_{\pi}(8')}_{9}$ ${}^{10}V_{\pi}(8) = \underbrace{\leq \pi(a s) \leq p(8',n 8,a)}_{a} \underbrace{r + \varphi V_{\pi}(8')}_{9}$ 9 11
$\frac{\sum \pi(a a)}{a} \frac{\sum \varphi(s',n)}{s,a} \sqrt{\pi(s')}$
$V_{\pi}(s) - \leq \pi(a s) \leq \varphi p(s', n s, a) V_{\pi}(s')$ 2 2
$= \sum_{\alpha} \sum_{\alpha} \sum_{\beta} \sum_{\beta} \sum_{\beta} \sum_{\beta} \sum_{\beta} \sum_{\beta} \sum_{\beta} \sum_{\alpha} \sum_{\beta} \sum_$
For 8=8'
scoeff of $VT(s) = (1 - \xi T(a s) \xi \psi b(s', 1 s,a)$
For 8781
Coeff of $V_{\pi}(s) = \underbrace{\{\xi \pi(a s) \xi \varphi \phi(s', \pi s, a)\}}_{s', h}$
Coeff of $V_{\pi}(s) \times V_{\pi}(s) = \underbrace{\Xi_{\pi}(a s)}_{a} \underbrace{\Xi_{\pi}(a s)}_{s',n} $

$= \sqrt{\pi(8)} + \leq \sqrt{k}c$
1/2 = V/ (8) + C [circococococo]
$V_{\pi}(s) = V_{\pi}(s) + \infty$ [since $\leq \varphi < 1$]
6 constant term Ve
we can observe that the value function increases only
We can observe that the value function increases only by a constant Vc and hence, does not affect the relative values of any states under any policies.
relative values of any states under any policies.
the same of the sa

Ex 3.16
Et termital time be T.
Solving the equation,
"VT'(8) = E [Gt' St = 8]
= E [= YR (R++++++++++++++++++++++++++++++++++
= E [= YR R++2 St-8] +
E [E pac St=8]
$= V_{\pi}(s) + E \left[\underbrace{\xi}_{k=0} V_{k} x \right] $
Here, Vc = E & you St = s 18 1 June 101
of T and Tis a random variable that normally varies from episode to episode. Different episodes will have different value-functions.
New Gt = is Gt + C (1-41)
\$ => It will increase VT when Tincreases.

Example
Consider an episodic task with one states and two actions AI and Az.
A1 -> Agent goes to terminal state with reward 1 "A2 -> Agent goes back to 5 with reward 0.
On adding 1 to each reward, when 12 is performed forever, Set = return is 1 which can be bigger than 2 if $\varphi < 1$.

$\frac{0.5}{3} V * (s) = \max_{\alpha \in A(s)} 0.7 * (s, \alpha)$ $= \max_{\alpha} E_{\pi *} [Gt] St = s, At = \alpha$ $= \max_{\alpha} E_{\pi *} [Rt+1 + \gamma Gt+1] St = s, At = \alpha$ $= \max_{\alpha} E[Rt+1 + \gamma V * (St+1)] St = s, At = \alpha$ $= \max_{\alpha} E[Rt+1 + \gamma V * (St+1)] St = s, At = \alpha$ $= \max_{\alpha} E[Rt+1 + \gamma V * (St+1)] St = s, At = \alpha$ $= \max_{\alpha} E[Rt+1 + \gamma V * (St+1)] St = s, At = a$ $= \max_{\alpha} E[Rt+1 + \gamma V * (St+1)] St = s, At = a$ $= \max_{\alpha} E[Rt+1 + \gamma V * (St+1)] St = s, At = a$
Substituting Divto 1
$V*(s) = \max_{a} q*(s,a)$
